THINK

Always check your
email

Human error is the
#1 source of data
breaches globally

How many emails per month put your firm at risk?

High-profile data breaches

PepsiCo

SSE

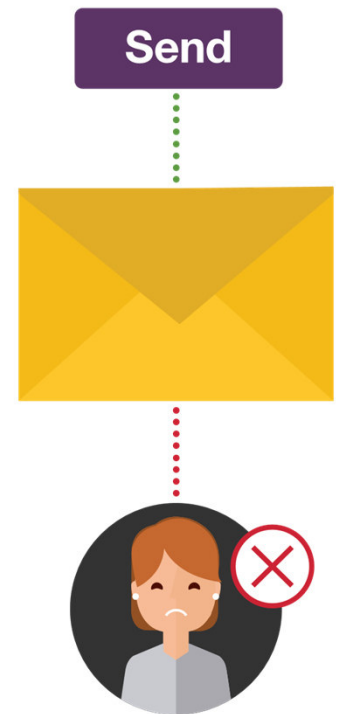

Boeing

1. Potential Leak: Accidentally emailing the wrong person

How to Stop it:
An email add-in to confirm recipients

2. Potential Leak: Sending the wrong document or file

How to Stop it:
An email add-in that confirms each
attachment is the correct one

3. Potential Leak: Hidden information in email attachments

How to Stop it:
A document metadata cleaner add-in

Machine Learning:
Sent items, DMS

Content Analysis:
Alert on credit card, NI, PI &
compliance specific alerts - GDPR,
ISO 27001

Oops!

Summary

- Human error is the #1 cause of data breaches.
- You can stop accidental data leaks happening over email with the following tools:
 - Recipient Checking
 - Attachment Checking
 - Metadata Cleaning
- Take back control of the information you share with others.
